## Test plan.

### Description:

The company Lumu is developing the [word counter](#) system, which is responsible for counting the words and characters entered.

### Scope

Note: The application has several functionalities, but we will check that when entering a text by keyboard, the counter is reactive to the change.

The counters to be taken into account are:

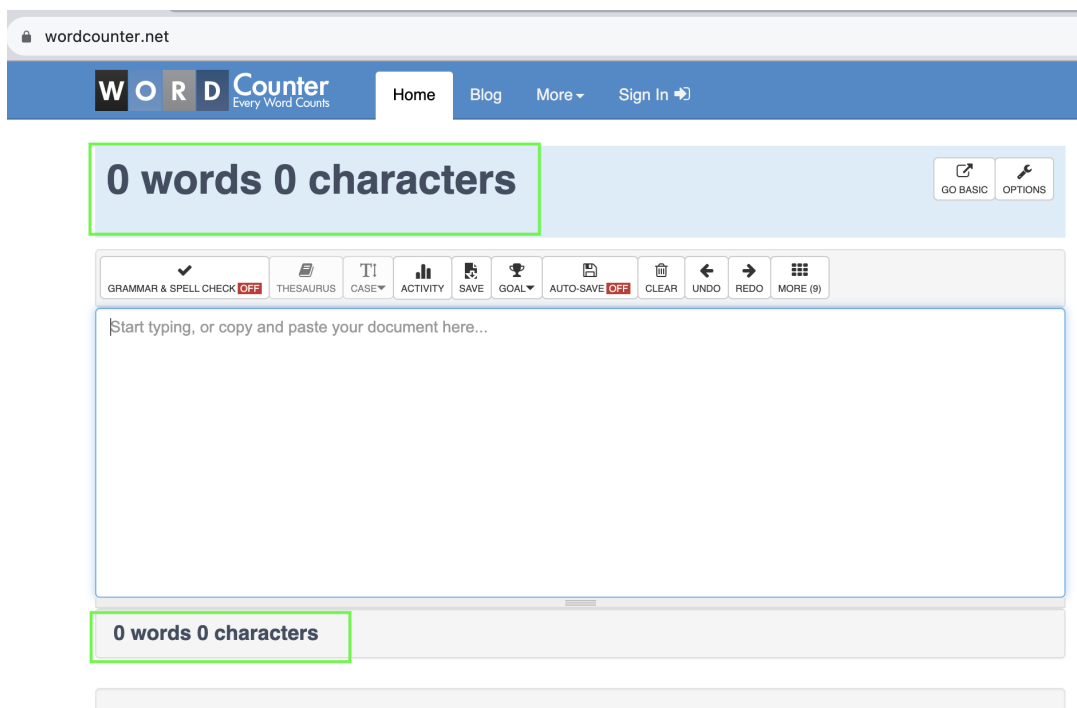

image 1

You wish to access the web page <https://wordcounter.net/> through the Chrome browser, in its most current version (116.0.5845.179), using the following functionalities.

- When entering the number of words or characters, the system should be reactive on the two counters (those shown in image 1).
- The word or character limits are as follows:
  1. You can have the scenario where you do not have any data entered and the counters should be at zero; additionally display the message (Start typing, or copy and paste your document here...)

2. When entering any character, the message (Start typing, or copy and paste your document here... ) should not exist.
3. The maximum number of characters is 48 and minimum 1.
4. The maximum number of words is 9 and minimum 1.

#### Out of scope:

- The correct operation of the software in
  1. Browsers other than Chrome or in different versions
  2. On mobile devices or tablets.
- Functionalities other than those mentioned in the scope.

#### Strategy:

The User Login will be performed through an automated test using the Java programming language and the Maven tool, with the Gradle dependency manager, starting on the main page, which is <https://wordcounter.net/>, where the field to enter the information is displayed.

Al ingresar el contador de las palabras debe iniciar en cero y al ingresar un carácter o palabra, el contador debe ser reactivo.

- When adding a word or character, both must be reactive based on the change entered.

#### Suspension criteria

It will be carried out when:

- The system does not comply with the requirements established by PO, after implementing the suspension will be 20 working days.
- The system is not in a QA environment.

#### Acceptance criteria:

- Features must be deployed in the QA environment and have been tested.
- Critical defects found during testing have been resolved and closed.
- When the user's record is correct with their specifications in the characters of each field.
- When the business validations are correct.
- When performing the E2E test all scenarios must be OK, based on the functional acceptance criteria.

#### Return Criteria:

- When the system has an error or failures with a percentage higher than 40%.
- When the system does not meet the acceptance criteria.

### **Pre-requirements:**

- Have access to the database to validate user registration.
- Have access to two different internet networks.
- That the application is installed in a quality environment.
- To have access to the application services.
- Access to the repository
- Access to JIRA

### **Limits:**

- No internet connection.

### **Assumptions:**

- That the unit tests are correctly tested.

### **Infrastructure:**

- Availability to database connection, if possible to the service.
- Access to Chrome
- Access to the testing environment.
- Access to Jira

## BUG

### 1. Home screen loses its design, when scrolling on the X and Y axis

**Platform:** Google Chrome | Mac Monterey

**Steps to Reproduce:**

- Enter [URL](#)
- Copying and pasting more than 30 times the same text
- Scroll down
- Scroll up

**Actual result:**

- Some parts of the screen go blank, after a few seconds the design is displayed again.

Note: when the screen is 25" (monitor or double screen) it takes more seconds to show the design.

**Expected Result:**

- The screen should not be blank

**Acceptance Criteria:**

- When scrolling, the page layout should persist.

**Link to the Video for Bug reproduction:** [evidence. 1](#), [evidence. 2](#)

### 2. When you have text in the field and open a new tab of the same site, it displays the information you had before.

**Platform:** Google Chrome | Mac Monterey

**Steps to Reproduce:**

- Enter [URL](#)
- Type the text "I'm Elvis M Honeys QA Automation ".
- Open a new tab and go to the [URL](#)

**Actual Result:**

- Displays the text content of the previous screen.

**Expected Result:**

- The text content must be zero, because it is a new tab.

**Acceptance Criteria:**

- When opening a new tab, the field must be blank.

**Link to the Video for Bug reproduction:** [evidence. 1](#)

### 3. When typing a URL in the field, the words are not being counted correctly.

**Platform:** Google Chrome | Mac Monterey

**Steps to Reproduce:**

- Enter URL
- Type the text "<https://www.loom.com/share/1318faa962d941209928f8cc09a7d1c3> "

**Actual Result**

- Is showing in the counter: 4 words 59 characters

**Expected Result:**

- The expected result would be 1 words 59 characters

**Acceptance Criteria**

- It is considered a word when it has a space between it.

Example:

Alan Miele: **2 words 10 characters**

AlanMiele: **1 words 9 characters**

## Suggestions

### 1. Security and privacy issues:

Description: When you close the browser and reopen it, the page displays the information you had previously.

### 2. Lack of customization

2. 1 Description: It is observed that the platform does not have an eye-catching design; it should have more eye-catching icons.

2.1.1 [opción 1](#)

2.2.1 [opción 2](#)

2. 2 Description: The platform must have a maximum number of characters in length

2. 3 Description: The scroll should only belong to the field and not to the main page.

### 3. Non-responsive design
